# HELLO THERE

reveal.js enables you to create beautiful interactive slide decks using HTML. This presentation will show you examples of what it can do.

# VERTICAL SLIDES

Slides can be nested inside of each other.

Use the *Space* key to navigate through all slides.

# **BASEMENT LEVEL 1**

Nested slides are useful for adding additional detail underneath a high level horizontal slide.

# BASEMENT LEVEL 2

That's it, time to go back up.

# SLIDES

Not a coder? Not a problem. There's a fully-featured visual editor for authoring these, try it out at <https://slides.com>.

# PRETTY CODE

```
1 import React, { useState } from 'react';  
2  
3 function Example() {  
4   const [count, setCount] = useState(0);  
5  
6   return (  
7     ...  
8   );  
9 }
```

Code syntax highlighting courtesy of [highlight.js](#).

# EVEN PRETTIER ANIMATIONS

```
1 import React, { useState } from 'react';
2
3 function Example() {
4   const [count, setCount] = useState(0);
5
6   return (
7     <div>
8       <p>You clicked {count} times</p>
9       <button onClick={() => setCount(count + 1)}>
10         Click me
11       </button>
12     </div>
13   );
14 }
15
16 function SecondExample() {
17   const [count, setCount] = useState(0);
```

# POINT OF VIEW

Press **ESC** to enter the slide overview.

Hold down the **alt** key (**ctrl** in Linux) and click on any element to zoom towards it using [zoom.js](#). Click again to zoom back out.

(NOTE: Use ctrl + click in Linux.)

# AUTO-ANIMATE

Automatically animate matching elements across slides  
with **Auto-Animate**.

**AUTO-ANIMATE**

**AUTO-ANIMATE**

# TOUCH OPTIMIZED

Presentations look great on touch devices, like mobile phones and tablets. Simply swipe through your slides.

# MARKDOWN SUPPORT

Write content using inline or external Markdown.  
Instructions and more info available in the [readme](#).

```
1 <section data-markdown>
2   ## Markdown support
3
4   Write content using inline or external Markdown.
5   Instructions and more info available in the [readme](https://revealj
6 </section>
```

Add the `r-fit-text` class to auto-size text

**FIT TEXT**

# FRAGMENTS

Hit the next arrow...

... to step through ...

... a fragmented slide.

# FRAGMENT STYLES

There's different types of fragments, like:

grow

shrink

fade-right,up,down,left

fade-in-then-semi-out

Highlight red blue green

# TRANSITION STYLES

You can select from different transitions, like:  
None - Fade - Slide - Convex - Concave - Zoom

# SLIDE BACKGROUNDS

Set `data-background="#dddddd"` on a slide to change the background color. All CSS color formats are supported.

# IMAGE BACKGROUNDS

```
<section data-background="image.png">
```

# TILED BACKGROUNDS

```
<section data-background="image.png" data-background-repeat="repeat" data-
```

# VIDEO BACKGROUNDS

```
<section data-background-video="video.mp4,video.webm">
```

A still from a movie showing Chris Pratt in a white shirt and striped tie, sitting at a desk and looking extremely shocked with his mouth wide open. Another person's back is visible in the foreground on the left.

... AND GIFS!

# BACKGROUND TRANSITIONS

Different background transitions are available via the `backgroundTransition` option. This one's called "zoom".

```
Reveal.configure({ backgroundTransition: 'zoom' })
```

# BACKGROUND TRANSITIONS

You can override background transitions per-slide.

```
<section data-background-transition="zoom">
```

Hey.

I'm Hakim El Hattab, a Swedish front end developer and interface designer. I co-founded and am working on **Slides** ++ .

I love to experiment with graphics and interactivity. Take a look at some of my favorite projects.

## IFRAME BACKGROUNDS

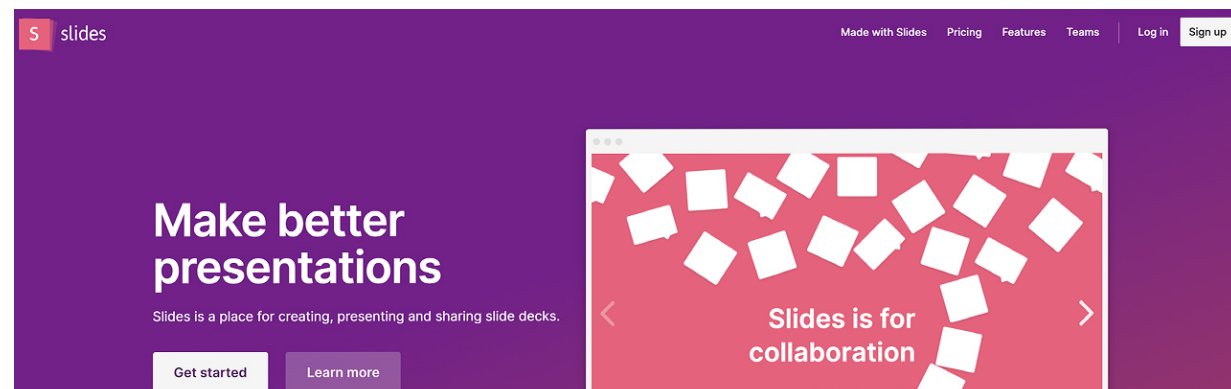

Since reveal.js runs on the web, you can easily embed other web content. Try interacting with the page in the background.

# MARVELOUS LIST

- No order here
- Or here
- Or here
- Or here

# FANTASTIC ORDERED LIST

1. One is smaller than...
2. Two is smaller than...
3. Three!

# TABULAR TABLES

| Item     | Value | Quantity |
|----------|-------|----------|
| Apples   | \$1   | 7        |
| Lemonade | \$2   | 18       |
| Bread    | \$3   | 2        |

# CLEVER QUOTES

These guys come in two forms, inline: *“The nice thing about standards is that there are so many to choose from”* and block:

*“For years there has been a theory that millions of monkeys typing at random on millions of typewriters would reproduce the entire works of Shakespeare. The Internet has proven this theory to be untrue.”*

# INTERGALACTIC INTERCONNECTIONS

You can link between slides internally, [like this](#).

# SPEAKER VIEW

There's a **speaker view**. It includes a timer, preview of the upcoming slide as well as your speaker notes.

Press the *S* key to try it out.

# EXPORT TO PDF

Presentations can be **exported to PDF**, here's an example:

# GLOBAL STATE

Set `data-state="something"` on a slide and `"something"` will be added as a class to the document element when the slide is open. This lets you apply broader style changes, like switching the page background.

# STATE EVENTS

Additionally custom events can be triggered on a per slide basis by binding to the data-state name.

```
Reveal.on( 'customevent', function() {  
  console.log( '"customevent" has fired' );  
} );
```

# TAKE A MOMENT

Press B or . on your keyboard to pause the presentation.  
This is helpful when you're on stage and want to take  
distracting slides off the screen.

# MUCH MORE

- Right-to-left support
- Extensive JavaScript API
- Auto-progression
- Parallax backgrounds
- Custom keyboard bindings

# THE END

- Try the online editor
- Source code & documentation
